

Tūtaekurī River at Puketapu

Peak flow rate per year

During Cyclone Gabrielle, the Tūtaekurī River at Puketapu had **4,800 cubic metres a second of water flowing at its peak**, which is nearly two Olympic size swimming pools of water per second.

Peak flow rate
The maximum amount of water measured in cubic metres flowing past a designated monitoring point.

An Olympic swimming pool filled to 2 metres equals 2,500 cubic metres.
